NR33 wound management

Review ATI Basic skills video on surgical asepsis, *wound dressing videos prior to lab.*

1. **WHAT are the goals of wound management?**

2. **Describe the following phases of wound healing?**
   
   - Inflammatory
   - Granulation
   - Wound remodeling

3. **Identify dressing materials according to type of wound.**

<table>
<thead>
<tr>
<th>Color</th>
<th>Dressing guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red wounds</td>
<td></td>
</tr>
<tr>
<td>Yellow wounds (infected)</td>
<td></td>
</tr>
<tr>
<td>Yellow wounds (fibrinous slough)</td>
<td></td>
</tr>
<tr>
<td>Black wounds</td>
<td></td>
</tr>
</tbody>
</table>

4. **Identify three types of moisture retentive dressings?**

5. **What is the purpose of the following dressing orders?**

   - Wet to damp (moist)
   - Wet to dry
6. What would you do if the dressing adheres to the wound bed in a wet to damp dressing change?

7. What would you do if the dressing is saturated at the time of change?

8. What is required for adequate wound healing to occur?

9. What would you do if the client does not evidence wound healing with a wound management protocol in place?

10. What would you do if the wound becomes foul smelling?

11. How would you document a dressing change?
